

What is Mac Address?

MAC: Media Access Control address: is a hardware identifier that uniquely identifies each device on a network. Primarily, the manufacturer assigns it.

- MAC address is a unique number which is used to track a device in a network.
- MAC address provides a secure way to find senders or receivers in the network.
- It helps prevent unwanted network access.
- Mac address is also used in Wi-Fi networks at the airport for a specific device in order to identify it.
